Read the given passage and answer the questions that follow. From language to cultures - there are annals about India's diversity writ in bold. At the heart of everything we hold close is our love for food; the aroma from warm hearths wafts in the air, a heady mix of history and meals. So heady, that we often forget that food has a large carbon footprint, and the menace of ever-growing fast-food businesses that contribute the lion's share to this problem. However, India's rich traditional and local edible biodiversity, with its focus on home cooked food, presents a ray of hope. Indian members of Relais & Châteaux, in partnership with Slow Food International, hope to bring back our forefathers' wisdom when it comes to eating, through the Slow Food movement, which started in the 1980s and aims to bring to the fore the connection of plate with people and the planet. Calling for the protection and promotion of traditional techniques associated with regional food cultures is Jaisal Singh, owner of SUJAN group of hotels.

SubQuestion No : 22

Read the given passage and answer the questions that follow.	
'War is what happens when words fail' says Margaret Atwood. After war what remains is only unimaginable damage. The innocent lives, livestock and property of citizens will be lost filling every spot with bloodshed and misery. It takes decades to normalise the psychological terrors of the victims of war. The consequences, in one form or the other, will bring bitterness even to the rest of the world. So, it is the responsibility of a nation's leader to protect his/her own people from the bitter wars. Impactful leadership, commitment to provide peace and comfort to the citizens, diplomatic strength and awareness of happenings around the world and neighbourhood are essential to any nation's leader. Nowadays, one who wins the battlefield is not the winner, in fact he is the first loser. One who endeavours to prevent war is a real hero. The nations of the modern world are in need of real heroes. So, the words 'bravery', 'tactics', and 'generalship' should be used for those who sacrifice anything for protecting his nation, other nations and mother earth from devastating results of war.

The ideal detection dog is extremely energetic with an excessive play drive. These dogs will happily work all day long, motivated by the expectation of a ball game as a reward for sample detection. The obsessive, high energy personalities of detection dogs also make them difficult to maintain as pets. As a result, they frequently find themselves abandoned to animal shelters, facing euthanasia. The programme rescues these dogs and offers them a satisfying career in conservation research.

Read the given passage and answer the question that follows.

Sniffer dog Tucker uses his nose to help researchers find out why a killer whale population off the northwest coast of the United States is on the decline. He searches for whale faeces floating on the surface of the water, which are then collected for examination. He is one of the elite team of detection dogs used by scientists studying a number of species including right whales and killer whales.

Conservation canines are fast becoming indispensable tools for biologists according to Aimee Hurt, associate director and co-founder of Working Dogs for Conservation, based in Three Forks, Montana. Over the last few years, though, so many new conservation dog projects have sprung up that Hurt can no longer keep track of them all. Her organisation's dogs and their handlers are fully booked to assist field researchers.

"Dogs have such a phenomenal sense of smell," explained Sam Wasser, director of the Centre for Conservation biology at the University of Washington in Seattle. He has worked with scat-detection dogs since 1999. Scientists have been using Conservation Canines in their research since 1999. These dogs have enabled them to non-invasively access vast amount of genetic and physiological information which is used to tackle conservation problems around the world. Such information has proved vital for determining the causes and consequences of human disturbances on wildlife as well as the actions needed to mitigate such impacts.
