# POWER SYSTEM ANALYSIS

- Power system analysis is a branch of electrical engineering that deals with the analysis and design of power systems, which are networks of interconnected power components that generate, transmit, and distribute electrical power to consumers. The purpose of power system analysis is to ensure the safe, reliable, and efficient operation of power systems.

## The Generator

### 3-phase output

# WHY ONLY 3 PHASE CIRCUITS ARE USED FOR GENERATION AND TRANSMISSION?

2 PHASE SYSTEM

Imp.

$$I_N = I L_0 + I L_{-90^\circ}$$

$$I_N = I \sqrt{2} \angle -45^\circ$$

balanced system

Peak/rms value of  $v_l$  or current of all the phases must be same.

angle  $\rightarrow \phi_n = \frac{360^\circ}{n}$   $n > 2$   
 b/w two phase =  $90^\circ$   $n = 2 \leftarrow$

DRDB

eg.  $E_A = E \angle 0^\circ$      $E_B = E \angle -120^\circ$

$E_C = E \angle -240^\circ$

# TYPES OF 3 PHASE CONNECTIONS:

BALANCED SYSTEM:

+ve seq (Δ connection)

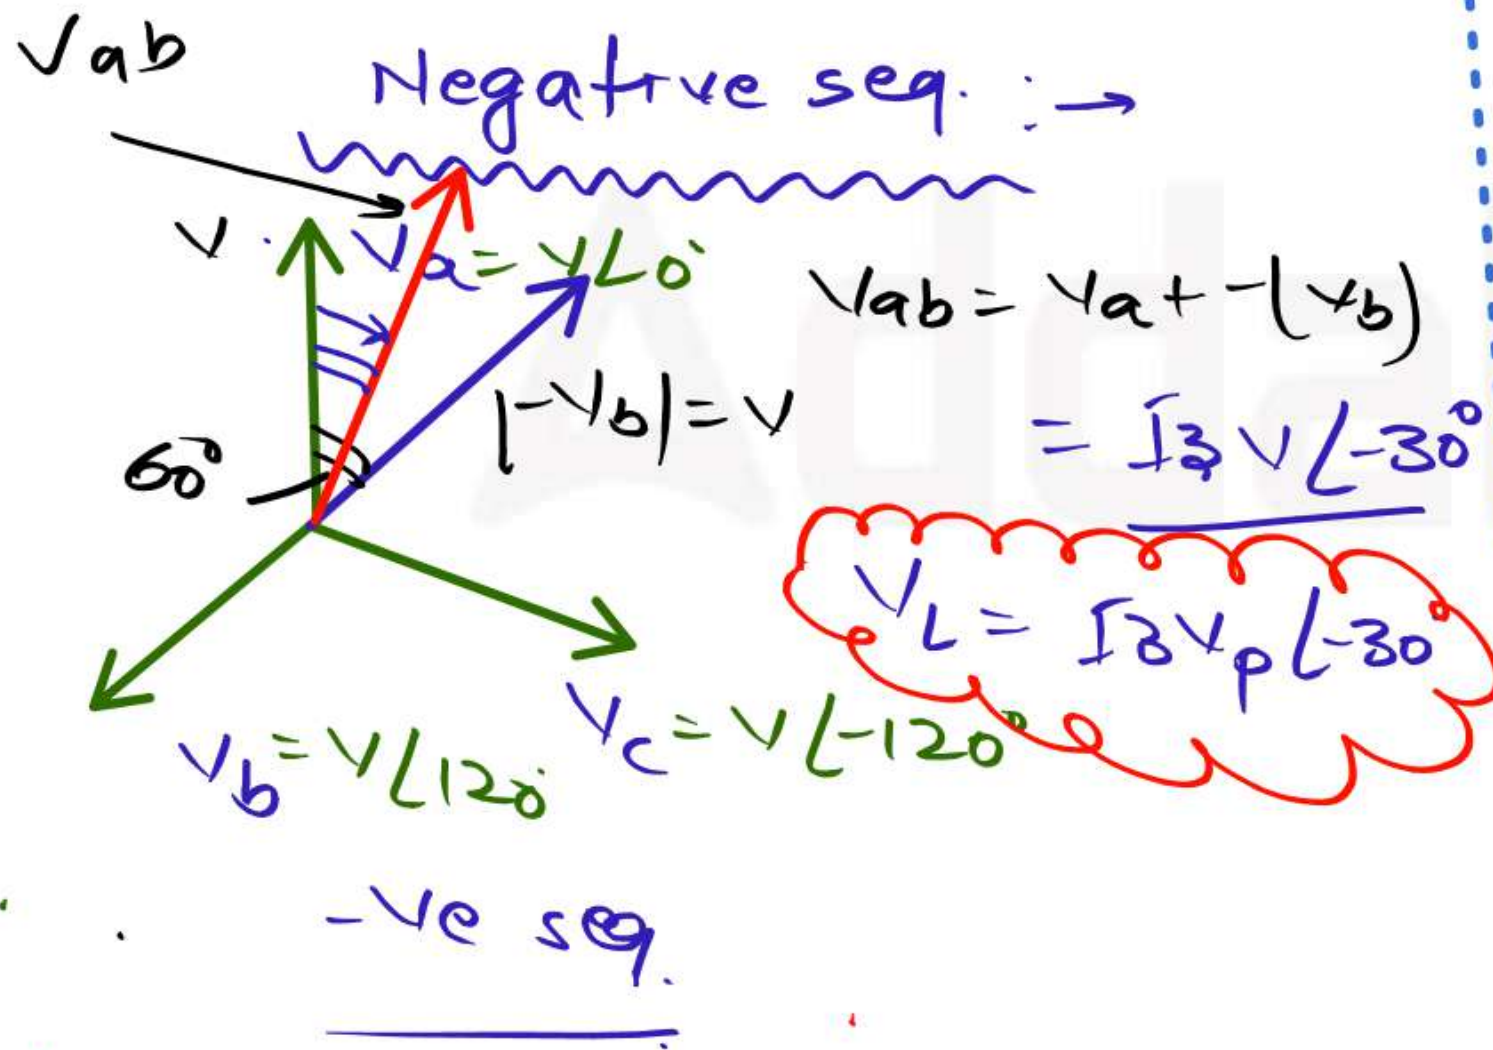

$V_{ab} = ?$

$V_{ab} = V_a - V_b = V_a + (-V_b)$   
 $V_{ab} = \sqrt{3}V \angle 30^\circ$

$R = \sqrt{A^2 + B^2 + 2AB \cos \theta}$

# RELATIONS BETWEEN LINE AND PHASE VALUE:

$$V_{ab} = \sqrt{3} V \angle 30^\circ \Rightarrow \boxed{V_{Line} = \sqrt{3} V_p \angle 30^\circ} \rightarrow (+ve \text{ seq})$$

$V_p = 10 \angle 30^\circ$   
 $V_{Line} = \sqrt{3} \times 10 \angle 30^\circ \angle 30^\circ = 10\sqrt{3} \angle 60^\circ$

$V_{Line} = \sqrt{3} \times 10 \angle 30^\circ \angle 30^\circ = 10\sqrt{3} \angle 60^\circ$

## RELATIONS BETWEEN LINE AND PHASE VALUE:

<u>-ve seq.</u>	$V_L = \sqrt{3} V_{pL} \angle -30^\circ$	$I_L = I_P$

# RELATIONS BETWEEN LINE AND PHASE VALUE:

delta-connection! →

$$I_a + I_{ca} = I_{ab}$$

$$\Rightarrow I_a = I_{ab} - I_{ca}$$
