Read the following passage and answer the questions 96 to 100:

Radically changing monsoon patterns, reduction in the winter rice harvest and a quantum increase in respiratory diseases all part of the environmental doomsday scenario which is reportedly playing out in South Asia. According to a United Nations Environment Programme report, a deadly three-

kilometer deep blanket of pollution comprising a fearsome cocktail of ash, acids, aerosols and other particles has enveloped in this region. For India, already struggling to cope with a drought, the implications of this are devastating and further crop failure will amount to a life and death question for many Indians. The increase in premature deaths will have adverse socio-economical consequences and a rise in morbidities will place an unbearable burden on our crumbling health system. There is no one to blame but ourselves for this. Both official and corporate India has always been allergic to any mention of clean technology. Most mechanical two wheelers roll off the assembly line without proper pollution control system, Little effort is made for R & D on simple technologies, which could make a vital difference to people's lives and the environment.

Richer countries can simply buy up excess carbon credits from poorer countries and continue to pollute. Rather than try to get the better of developing countries, who undoubtedly have taken up environmental short cuts in their bid to catch up with the West, the USA should take a look at the environmental profligacy, which is going on within. From opening up virgin territories for oil exploration to relaxing the standards of drinking water, US Policies are not exactly beneficial, not even to America's interest. Now, we have realized that all in this together and that pollution anywhere should be a global concern otherwise, there will only be more tunnels at the end of the tunnel.

99. Which one of the following is an indicator of environmental degradation in South Asia?
- Radically changing monsoon pattern
 - Crumbling healthcare system
 - Socio-economic inequalities
 - Inadequate pollution control measures
100. What will amount to a life and death question for many Indians?
- Shortage of monsoon
 - A deep blanket of pollution
 - Crop failure
 - Shortage of food grains coupled with frequent droughts
