In the following question below are given some statements followed by some conclusions based on those statements. Taking the given statements to be true even if they seem to be at variance from commonly known facts. Read all the conclusions and then decide which of the given conclusion logically follows the given statements.

Statements:

I. No Bottle is a Glass.

II. Some Water are Bottles.

Conclusion:

I. Some Water are not Glasses.

II. All Glasses are Water.

- 1. ✓ Only conclusion I follows
- 2. * Only conclusion II follows

- 3. * Both conclusions I and II follows
- 4. * Neither conclusion follows

Correct Marks: 1 Wrong Marks: 0

కింది ప్రశ్నలో కొన్ని ప్రకటనలు ఇవ్వబడ్డాయి, ఆ ప్రకటనల ఆధారంగా కొన్ని పర్యవసానాలు ఇవ్వబడ్డాయి. ఇచ్చిన ప్రకటనలు సాధారణంగా తెలిసిన వాస్తవాలకు భిన్నంగా ఉన్నట్లు అనిపించినప్పటికీ వాటిని వాస్తవంగా పరిగణించాలి. అన్ని పర్యవసానాలను చదివి, ఇచ్చిన పర్యవసానాలలో ఏది తార్కికంగా ఇవ్వబడిన ప్రకటనలను అనుసరిస్తాయో నిర్ణయించండి. ప్రకటనలు:

I. F ఏదీ కూడా K కాదు.

II. కొన్ని F లు J లు.

పర్యవసానం:

I. K ఏదీ కూడా J కాదు.

II. అన్ని F లు J లు.

III. K ఏదీ కూడా F కాదు.

Options:

- 1. * పర్యవసానం II మాత్రమే అనుసరిస్తుంది
- 2. * I మరియు II రెండు పర్యవసానాలు అనుసరిస్తాయి
- 3. * ఏ పర్యవసానం కూడా అనుసరించదు
- 4. ✔ పర్యవసానం III మాత్రమే అనుసరిస్తుంది

Question Numbers: (147 to 150)

Read the following information carefully and answer the given questions.

More than 99% of all organisms that have ever lived on Earth are now extinct. Most of these just died out quietly. However, in Earth's history, there have been five major mass extinction events – known as the big five – during which many species became extinct at the same time

Each of the big five events caused at least a 40% loss of all species on Earth. Yet humans hold a particular grudge against the most recent one, which brought a sudden end to the 160-million-year history of the dinosaurs. This was the Cretaceous-Paleogene extinction and it happened 66 million years ago, wiping out about 75% of all species on Earth at the time. Except for sea turtles and crocodiles, no four-legged animals bigger than 25 kg survived.

After decades of heated debate, last week, an international team of scientists with data from four independent laboratories published a study claiming to have ended the debate. They say the 12 km-wide asteroid was the one to blame.

The study looked at rock samples collected in the crater, which is now underwater. They found a layer of terrestrial mud mixed with "space dust" containing the element iridium, which can be found in high concentrations in meteorites but is rare in the Earth's crust. This layer was four times thicker in the impact crater than in the surrounding area.

The team found a 5 cm layer of sediment immediately below the limestone from the earliest Paleogene, the geologic period that began immediately after the extinction. This thin layer of sediment had iridium concentrations of one part per billion, compared to the 0.04 parts per billion in the Earth's crust.

The asteroid is thought to have hit the planet at about 20 km per second, more than 50 times faster than the speed of sound in the air. Not only did it destroy the immediate surroundings, but it also sent a cloud of vaporised rock and microscopic dust with high levels of iridium that travelled across the Earth. The global blanket of cloud blocked out sunlight, cooled Earth's surface for decades by up to 10°C and triggered a global "impact winter". The cold and dark regime was followed by large-scale photosynthesis shutdown, disrupted food webs

worldwide and the collapse of ecosystems.

Spikes of iridium in dust from this time have been found in over 100 places around the world from America, Asia, Europe, Oceania, all the way to Antarctica. These were first identified in findings from the 1980s.

The early studies did not win a global consensus because the evidence couldn't link the high iridium concentrations to the Chicxulub crater. But this new study provides this crucial link and places an important time constraint too. The dust must have deposited within just a few decades – less than 20 years – after the impact.
