Directions (71-79): Read the passage given below and answer the following questions.

The onset of Covid-19 has brought to a halt an astonishing expansion of restaurants observed in the past decade. But being deprived of restaurants has made people realise how much they value them. Eating out fulfils needs which seem fundamental to human nature. People need to socialise, to seal deals and to peer at their fellow humans.

People have long feasted outside the home. Before the use of coal became widespread in England in the 17th century, preparing food at home involved spending a lot on wood or peat. Today dining out is seen as an indulgence, but it was the cheapest way to eat for most of human history. But by the 18th century, capitalism took off, public spaces became sites of rational dialogue which were open to all. Eating out became less of a communal activity focused on calorie intake and more of a cultural experience—and a place where people could show off their wealth.

By the 20th century, however, cooking at home was becoming ever easier. Average house sizes grew and appliances such as the food processor and the dishwasher reduced preparation and clean-up times. Dining out became relatively more expensive. And yet, a few economic changes ensured that demand for restaurants grew despite rising prices.

One of them is immigration. Over the last century the net **flow** of migrants into rich countries, relative to population, more than quadrupled. Starting a restaurant is a good career move for new arrivals. Migrants also tend to improve the quality of an area's restaurants. Another factor was changing working patterns. Historically poor people have tended to work longer hours than rich ones. But in the latter half of the 20th century the opposite became true. The **upshot** was that the people with the most money to spend on dining out increasingly needed it most, since they had the least free time.

The pandemic has led to many people buying more takeout than before, while others have a newfound love of cooking. That means _____ still further from the utilitarian model of the 18th century and before, and instead doubling down on what they do best: offering those who need to eat a taste of romance, glamour, and love.

Q71. What effect of the pandemic on restaurants has been mentioned by the author in the passage?

- (a) A severe lack of essential items has hindered the supply chain of restaurants.
- (b) The period during the pandemic led to a stop in the growth of restaurants.

- (d) Restaurants observe less customers due to a fear of lack of social distancing measures.
- (e) Due to the continuous waves of the pandemic, restaurants struggle to remain open.

- (c) Being able to show off wealth to society

Q73. According to the passage, why did people prefer eating out before the 17th century?

Q74. What conundrum does the author present against the growth of restaurants the past century?

- (c) The interest in restaurants piqued in the period despite many nations being war-ridden.
- (d) The growth of restaurants despite cooking becoming cheaper and more convenient.
- (e) The deadly plagues during the period did not dissuade people from going out to eat.

Q75. How did migrants contribute to a rise in the growth of restaurants?

- (a) Migrants added to the population of a country and thus contributed to increased consumption.
- (b) A significant portion of the migrant population started restaurants in the countries they came to.
- (c) Countries with a high rate of immigration gave relaxations on items of necessity for the public.

(d) An immigrant population brought with it a different culture, thus reviving interest in cuisine.

Directions (24-30): Read the following passage and answer the given questions below it with the help of the information provided in it.

Screaming is a unique noise. Research suggests when we scream in fear, the noise serves the dual purpose of sharpening our own focus in the face of a threat as well as of warning others. In fact, our brains process screams in a unique way. Most noises we hear are delivered from our ear to an area of the brain devoted to analyzing a sound and breaking it into its component parts, such as gender, age, and tone; high or low; a brass, stringed or electric instrument — or several combined; a ribbit or a coo, and what animal makes that sound. This **indicates** that we differentiate all the noises we hear everyday, even subconsciously.

A scream is different though, according to David Poepple, PhD, a professor of psychology and neural science at New York University. Poepple is the lead author of a 2015 study that looked into what happens in the body when people scream in fear. A scream goes straight from the ear to the amygdala, the part of the brain that processes fear and kickstarts the body's fight-or-flight response. The sound jolts our brains into increased alertness and analysis. This is especially true for screams when we're scared. These have a unique sound signature encompassed by the term "roughness." This roughness is what serves to alert others to danger. Humans and other animals scream for many reasons — in joy, in surprise, in fear. But we've evolved to be able to produce different shrieks and to be able to discern the difference when we hear them. (Incidentally, roughness is also why we find the sound of a baby crying and fingernails on chalkboards disturbing; both sounds have high roughness.) If we **focus on** the sounds that gain our attention, we will be able to tell which one is rough and which is not.

But what about people who have the opposite reaction when they're scared? What about the people who don't scream in fear, but become speechless in the face of a threat? This has been less studied, but it's likely a part of the third, overlooked response to terror: paralysis. Contrary to pop medicine, fight and flight aren't the only two reactions to something scary. Humans, like other animals, also evolved the option to freeze, or "play dead" in the face of a threat. This happens involuntarily, when the cerebellum, the part of the brain that regulates muscle activity, overpowers other terrified brain responses and basically shuts down all movement. Since screaming takes quite a few muscles (probably a little less than the 100 used for speaking), a person frozen in fear is rendered mute as well as immobile.

Q24. Choose the statement(s) which is/are TRUE based on the information given in the passage.

- (I) Our systems are built in a way that only allows us to scream in dangerous or threatening situations.
 - (II) One of the ways humans tackle fear is by going into a freeze mode and acting dead which is a similar action to animals.
 - (III) The brain sorts the noises we hear regularly on the basis of factors such as gender or high or low tone, age, etc.
- (a) Both II and III
 - (b) Both II and I
 - (c) Only III
 - (d) Both I and III
 - (e) Only I

Q25. According to the article, what contributes to alerting someone of the danger a person is in?

- (a) The gestures and expressions we make when we are confronted with a seemingly dangerous situation.
- (b) The scream one lets out when faced with danger holds an element of roughness which is crucial for letting others know of the possible danger.
- (c) Secretion of certain fluids and juices in our bodies by our organs play a part in accomplishing the above said thing.
- (d) The frequency of our screams, i.e., how often we shout in the given amount of time can alert others of the presence of danger.
- (e) None of the above

Q26. Among the following statements, choose option(s) which are FALSE in accordance with the information given in the passage.

- (I) The part of the brain that understands the fear of the situation and sends us into a full blown fight/flight response is called amygdala.
 - (II) The number of muscles used in the process of speaking are over 100.
 - (III) The purpose of a scream is to vent out your anger and release the emotions a person has been withholding inside.
- (a) Both I and II
 - (b) Only III
 - (c) Only II
 - (d) Only I
 - (e) Both II and III

Q27. Choose the option which states the reason for why some people go mute when they are scared.

- (a) The brain finds it hard to concentrate between how to combat the dangerous situation and figuring out how to talk which leaves a person mute.
- (b) Some people find that they don't want to express their feelings of terror and fright which is why they choose to remain quiet in those moments.

- (c) A certain part of the brain responsible for overlooking muscle activity takes over other responses of the brain and forces every movement of the body to shut down, including speech.
- (d) Being quiet has been found to help do away with the dangerous and harmful factors that a person might be facing at that exact moment.
- (e) None of the above

Q28. Among all the three responses to fear, how does a scream help us in possible dangerous situations?

- (a) The brain processes the scream in a part which helps activate our fight or flight mode which then helps us become aware and scan the situation.
- (b) Scream can notify the people in your surroundings like your neighbours or anybody in close vicinity to you.
- (c) When you scream, your vocal cords stretch and become flexible enough to scream louder and warn others of the situation.

accept means to agree to take something that somebody offers you

except means not including somebody/something; apart from the fact that

S4. Ans.(c)

Sol. The error lies in part (C). Here 'safety' should be 'safe' as we need an adjective here for the noun 'place'.

Unusual- not habitually or commonly occurring or done.

S12. Ans.(d)

Sol. The given sentence contributes to the central theme of the paragraph which is about healthy sleeping habits by providing a statistical data of adults experiencing sleeping issues. Thus, the most suitable word for the given blank is 'suffers'. All the other words are either grammatically or contextually incorrect.

S15. Ans.(a)

Sol. A Modal verb is followed by another verb in the base form. Since 'can' is a modal verb, the main verb should be in its base form. This shortlists our options to 'lead' and 'consist'. Lead means cause (a person or animal) to go with one by holding them by the hand, a halter, a rope, etc. while moving forward; while consist means be composed or made up of. Hence, 'lead' is the most suitable word.

Indicated- point out; show.

Transformed- make a marked change in the form, nature, or appearance of.

Caused- make (something, especially something bad) happen.

S16. Ans.(e)

Sol. The given sentence of the passage mentions the conditions which further aggravate the condition of sleep deprivation. Thus, the most suitable word for the given blank is 'chronic' which means (of an illness) persisting for a long time or constantly recurring.

Optimize- make the best or most effective use of (a situation or resource).

Retrieval- the process of getting something back from somewhere.

Estimate- roughly calculate or judge the value, number, quantity, or extent of.

Decline- diminish in strength or quality; deteriorate.

Aggregate- a whole formed by combining several separate elements.

Impair- weaken or damage (something, especially a faculty or function).

S19. Ans.(b)

Sol. The given highlighted phrase is incorrect. The sentence is in past continuous tense hence 'operates' in statement is incorrect hence option (c) is also incorrect. In option (a), 'has' is incorrect because subject (establishments and factories) is plural here therefore option (d) is also incorrect. Hence correct choice is option (b).

S20. Ans.(a)

Sol. The highlighted phrase in the statement is incorrect as sentence is in Past indefinite. In option (b), 'have' is incorrect as subject (DCW) is singular. Option (c) is in Perfect continuous hence incorrect. In Option (d), 'issue' is incorrect as 'has+v3' is correct.

S21. Ans.(d)

Sol. In the highlighted phrase 'spend' is incorrect because sentence is in past tense and third form of spend is 'spent' therefore option (b) is also incorrect. In option (a), 'year' should be 'years'. In option (b), 'then' should be 'than' hence option (c) is also incorrect.

S22. Ans.(e)

Sol. The highlighted phrase in the sentence is correct hence no improvement required is correct choice.

S23. Ans.(c)

Sol. The correct replacement of the highlighted phrase is "has the skills" as the sentence follows the structure of present tense. Moreover, the subject of the sentence is singular. Hence, option (c) is the correct choice.

S24. Ans.(a)

Sol. The correct choice for the answer is option (a): *Both II and III.*

Statement II is true because it is stated in the last paragraph of the passage that "humans, like other animals, also evolved the option to freeze, or "play dead" in the face of a threat."

Statement III is true because in the first paragraph it says: *Most noises we hear are delivered from our ear to an area of the brain devoted to analyzing a sound and breaking it into its component parts, such as gender, age, and tone; high or low; a brass, stringed or electric instrument — or several combined; a ratchet or a caw, and what animal makes that sound.*

Statement I is incorrect because in the last paragraph it says "Humans and other animals scream for many reasons — in joy, in surprise, in fear. " This tells us that there can be many reasons for humans screaming besides fear.

Hence, option (a) is the correct choice for the answer.

S25. Ans.(b)

Sol. The correct choice for the answer is option (b): *The scream one lets out when faced with danger holds an element of roughness which is crucial for letting others know of the possible danger.*

This answer is found in the second paragraph where it says: This is especially true for screams when we're scared. These have a unique sound signature encompassed by the term "roughness." This roughness is what serves to alert others to danger.

The rest of the options are not mentioned anywhere in the passage given. Therefore they cannot be considered for the answer.

Hence, option (b) is the correct choice for the answer.

S26. Ans.(e)

Sol. The correct choice for the answer is option (e): *Both II and III*

Statement II is false as the passage says: *Since screaming takes quite a few muscles (probably a little less than the 100 used for speaking), a person frozen in fear is rendered mute as well as immobile.*

Statement III is also false because it can be found in the article that: *Research suggests when we scream in fear, the noise serves the dual purpose of sharpening our own focus in the face of a threat as well as of warning others.*

The facts present in the passage help us figure out why the statements II and III are false.

Hence, option (e) is the correct choice for the answer.

S27. Ans.(c)

Sol. The correct choice for the answer is option (c): *A certain part of the brain responsible for overlooking muscle activity takes over other responses of the brain and forces every movement of the body to shut down, including speech.*

The answer is found towards the end of the last paragraph: *This happens involuntarily, when the cerebellum, the part of the brain that regulates muscle activity, overpowers other terrified brain responses and basically shuts down all movement. Since screaming takes quite a few muscles (probably a little less than the 100 used for speaking), a person frozen in fear is rendered mute as well as immobile.*

All the other options are nowhere to be found in the above passage.

Hence, option (c) is the correct choice for the answer.

S28. Ans.(a)

Sol. The correct choice for the answer is option (a): *The brain processes the scream in a part which helps activate our fight or flight mode which then helps us become aware and scan the situation.*

This answer is present in the second paragraph: *A scream goes straight from the ear to the amygdala, the part of the brain that processes fear and kickstarts the body's fight-or-flight response. The sound jolts our brains into increased alertness and analysis.* Hence, option (a) is the correct choice for the answer.

S29. Ans.(b)

Sol. The correct choice for the answer is option (b): *signals.* To signal means to convey information or instructions by means of a gesture, action, or sound.

Indicate means to express an intention, opinion, or wish in an indirect way.

Hence, *signals* is the word most similar to *indicates*.

To announce means to make a formal public statement about a fact, occurrence, or intention.

To bargain means an agreement between two or more people or groups as to what each will do for the other.

To divide means to separate or be separated into parts.

Flows mean the action or fact of moving along in a steady, continuous stream.

S30. Ans.(d)

Sol. The correct choice for the answer is option (d): *concentrate on.*

Focus on or concentrate on have similar meanings which can be explained as to give most of your attention to someone or something.

The rest of the phrases are not applicable because they all have different meanings. Hence, they cannot be used to replace the given phrase.

Solutions (31-35):

Building	Total Flats	Vacant Flats	Occupied Flats
A	400	160	240
B	460	120	340
C	540	180	360
D	600	220	380
E	420	200	220

S31. Ans.(c)

Sol. Required percentage = $\frac{(180+220)}{(380+220)} \times 100 = 66\frac{2}{3}\% \approx 67\%$

S32. Ans.(a)

Sol. Required ratio = $\frac{240+220}{180+220} = \frac{460}{400}$
= 23 : 20

S33. Ans.(b)

Sol. Average vacant flats in A and E = $\frac{160+200}{2} = 180$

Required percentage = $\frac{180}{360} \times 100 = 50\%$

S34. Ans.(d)

Solutions (41-45):

	Group X	Group Y	Group Z	Total
A	30	20	40	90
B	40	25	15	80
C	50	25	40	115
Total	120	70	95	285

S41. Ans.(b)

Sol. Let length of train A = 3x

Length of train B = 5x

Speed of train A = $72 \times \frac{5}{18} = 20$ m/sec

Speed of train B = $54 \times \frac{5}{18} = 15$ m/sec

ATQ,

$\frac{8x}{20+15} = 16$

$\Rightarrow x = 70$
